

Operation & Maintenance of Wind Farms

Operation & Maintenance of Wind Farms

Energy and Climate Academy offers in collaboration with VIA University College and Fredericia College of Marine and Technical Engineering a course in O&M management.

COURSE CONTENT

As the number of windfarms increases, so does the demand for managers to handle the planning, operation and maintenance. Today the personnel primarily get the competencies to handle these tasks through on the job training, but this course offers a formalized education in this area.

You will gain insight into:

- Operation & Maintenance philosophy
- Basic theories
- Principles
- Methods
- Work-tools
- Roles
- Leadership

You will be able to formulate, analyze, audit, and exercise management and organization according to applicable rules and standards in the "Operation & Maintenance of Offshore Wind Farms

TARGET AUDIENCE

The course is designed for employees and managers who already have or wish to get the responsibility for operation and maintenance of a windfarm.

BLENDED LEARNING

The course is designed as blended learning, which combine net-based learning with 3 days of classroom training.
